Connecting the world's devices

Revolutionising how connected devices interact in the Web3 & Machine2Machine economy.

Run a node Learn more

What is Minima?

Minima is the only blockchain that runs in full on mobile & IoT devices. It enables any device to become its own server, so it can send value & data across the network.

The problem

140 billion connected devices will be online by 2023. Yet without a way to communicate & transact, these devices will be underutilised & fail to realise their true potential.

The solution

Minima is the infrastructure layer needed for connected devices to send value & data securely. It empowers any device to become an autonomous economic agent.

Our journey

Minima was born out of the desire to build a network that empowers freedom for all.

2024

Q1

- Minima Core 0.1 - Alpha version completed
- Swisscom Blockchain - Code Audit

2023

Q2

- Swisscom Blockchain - Testnet launch

2022

Q3

- Whitepaper release
- Website V1 launch

2021

2020

2019

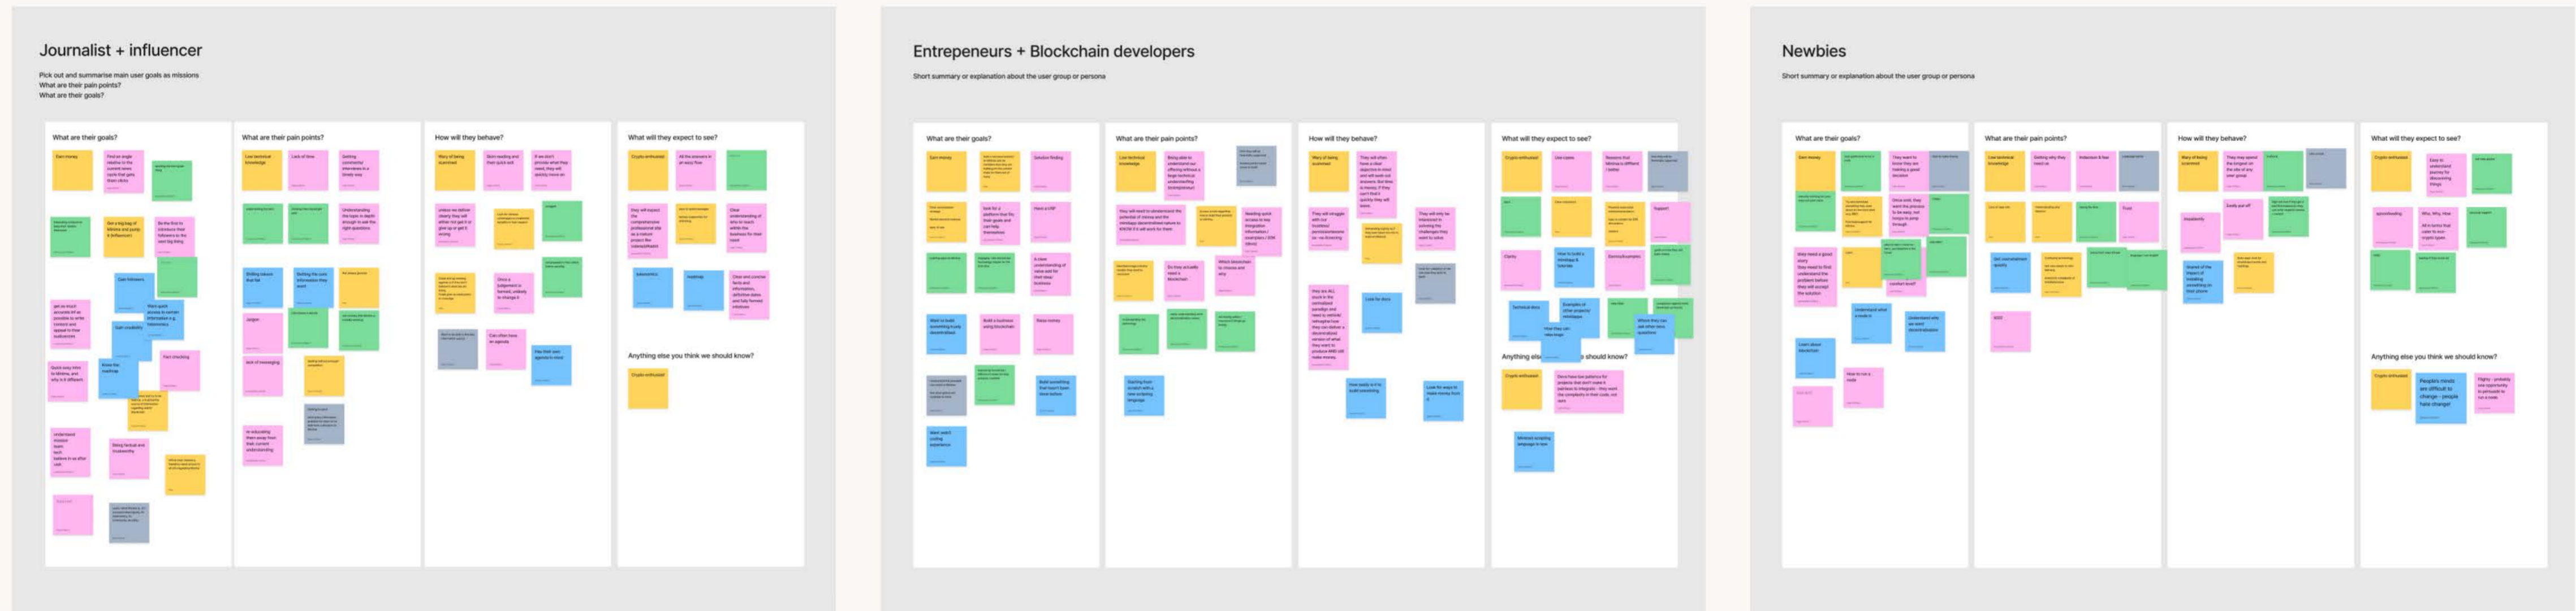

Q4

- Telco Billings dApp PoC completed
- Telco Innovation Lab goes live

2018

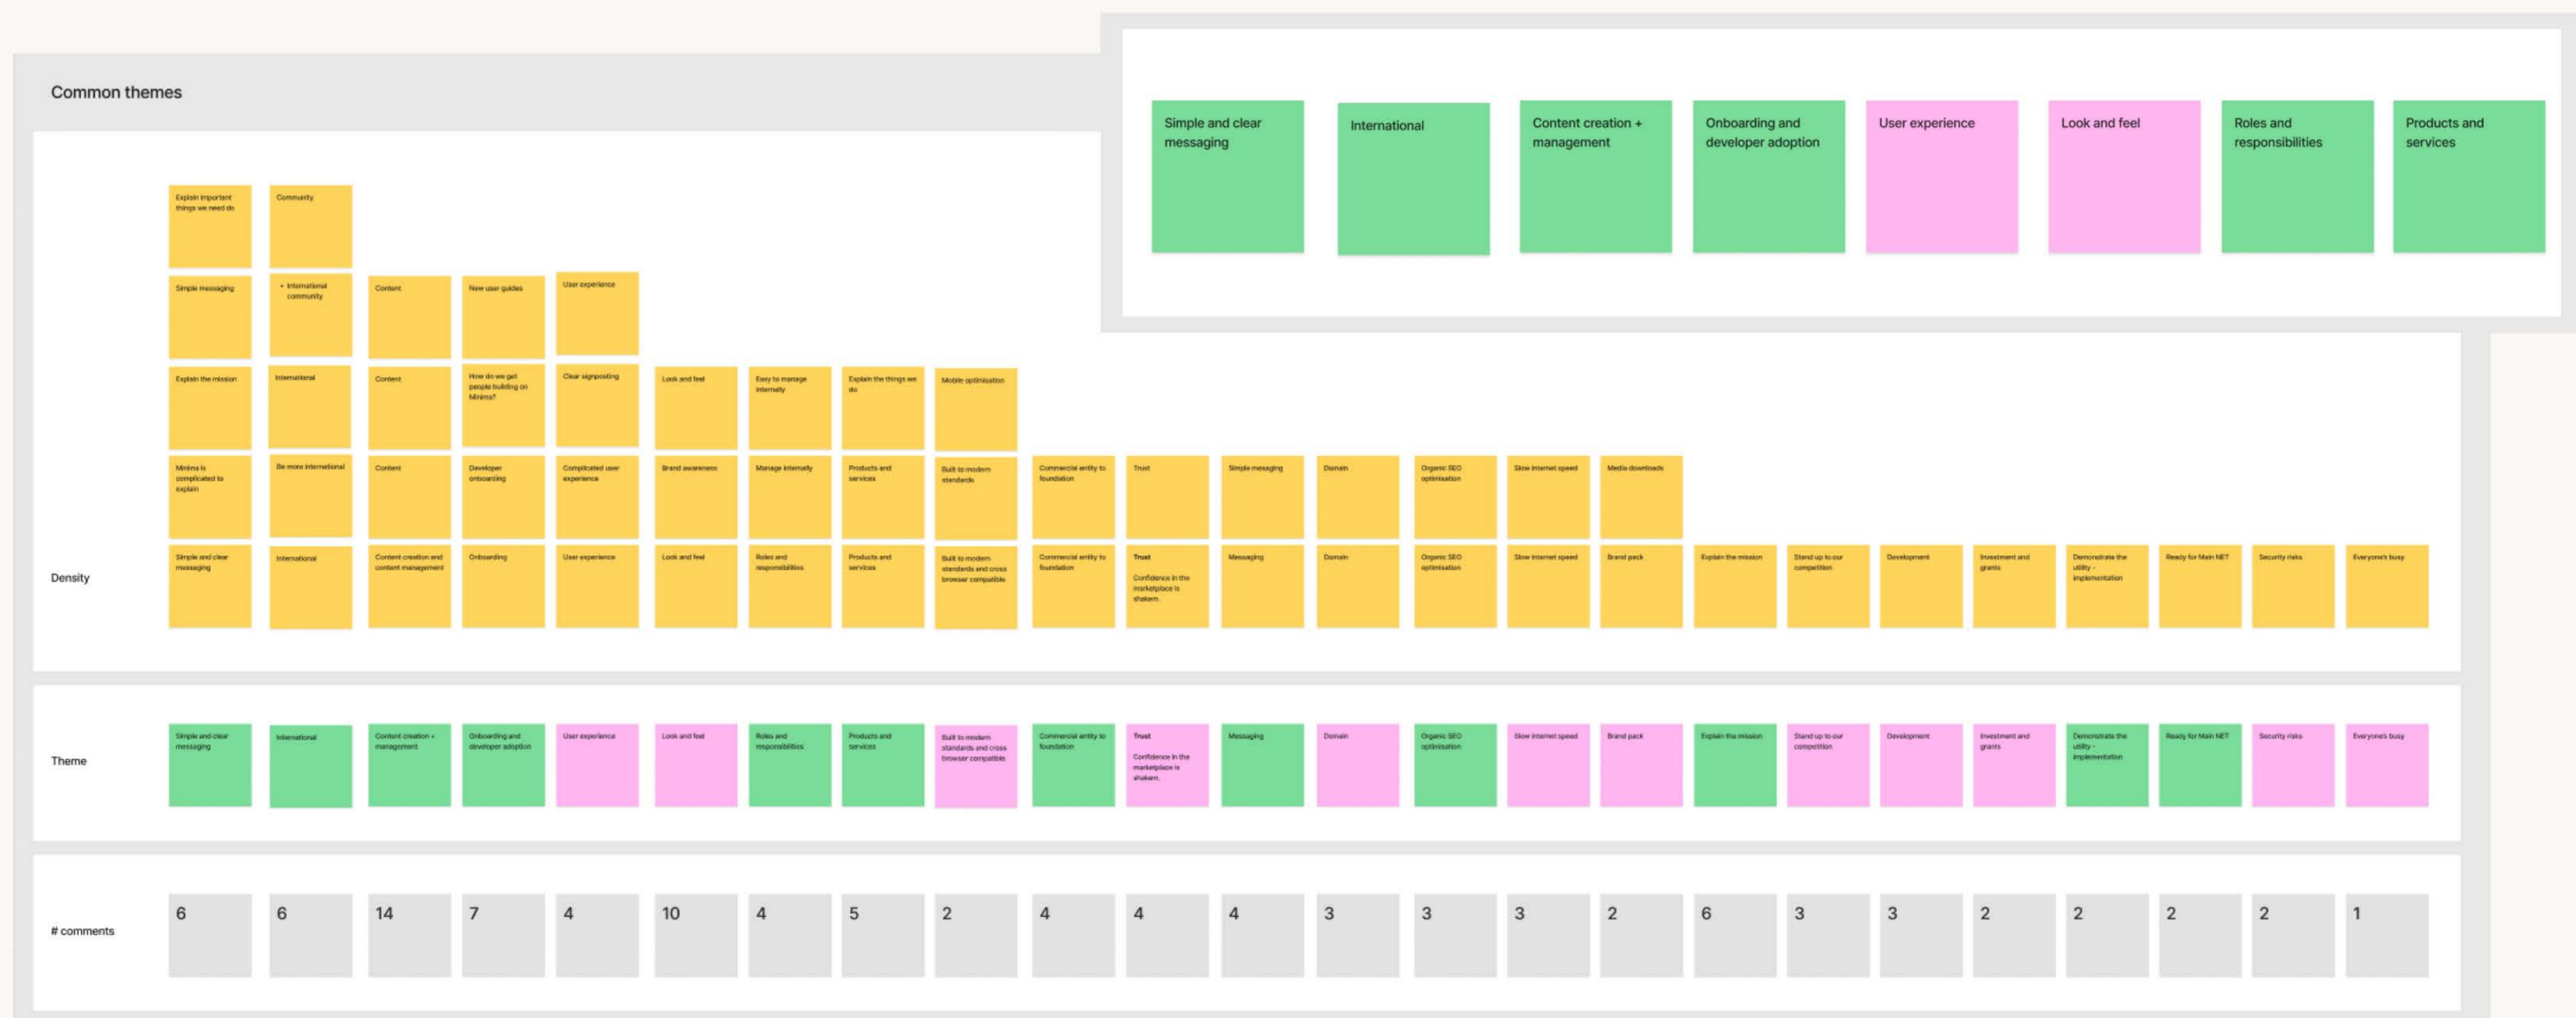

USER ANALYSIS ↓

Identifying the goals, pain points, behaviour and expectations of the three user groups identified in the focus group.

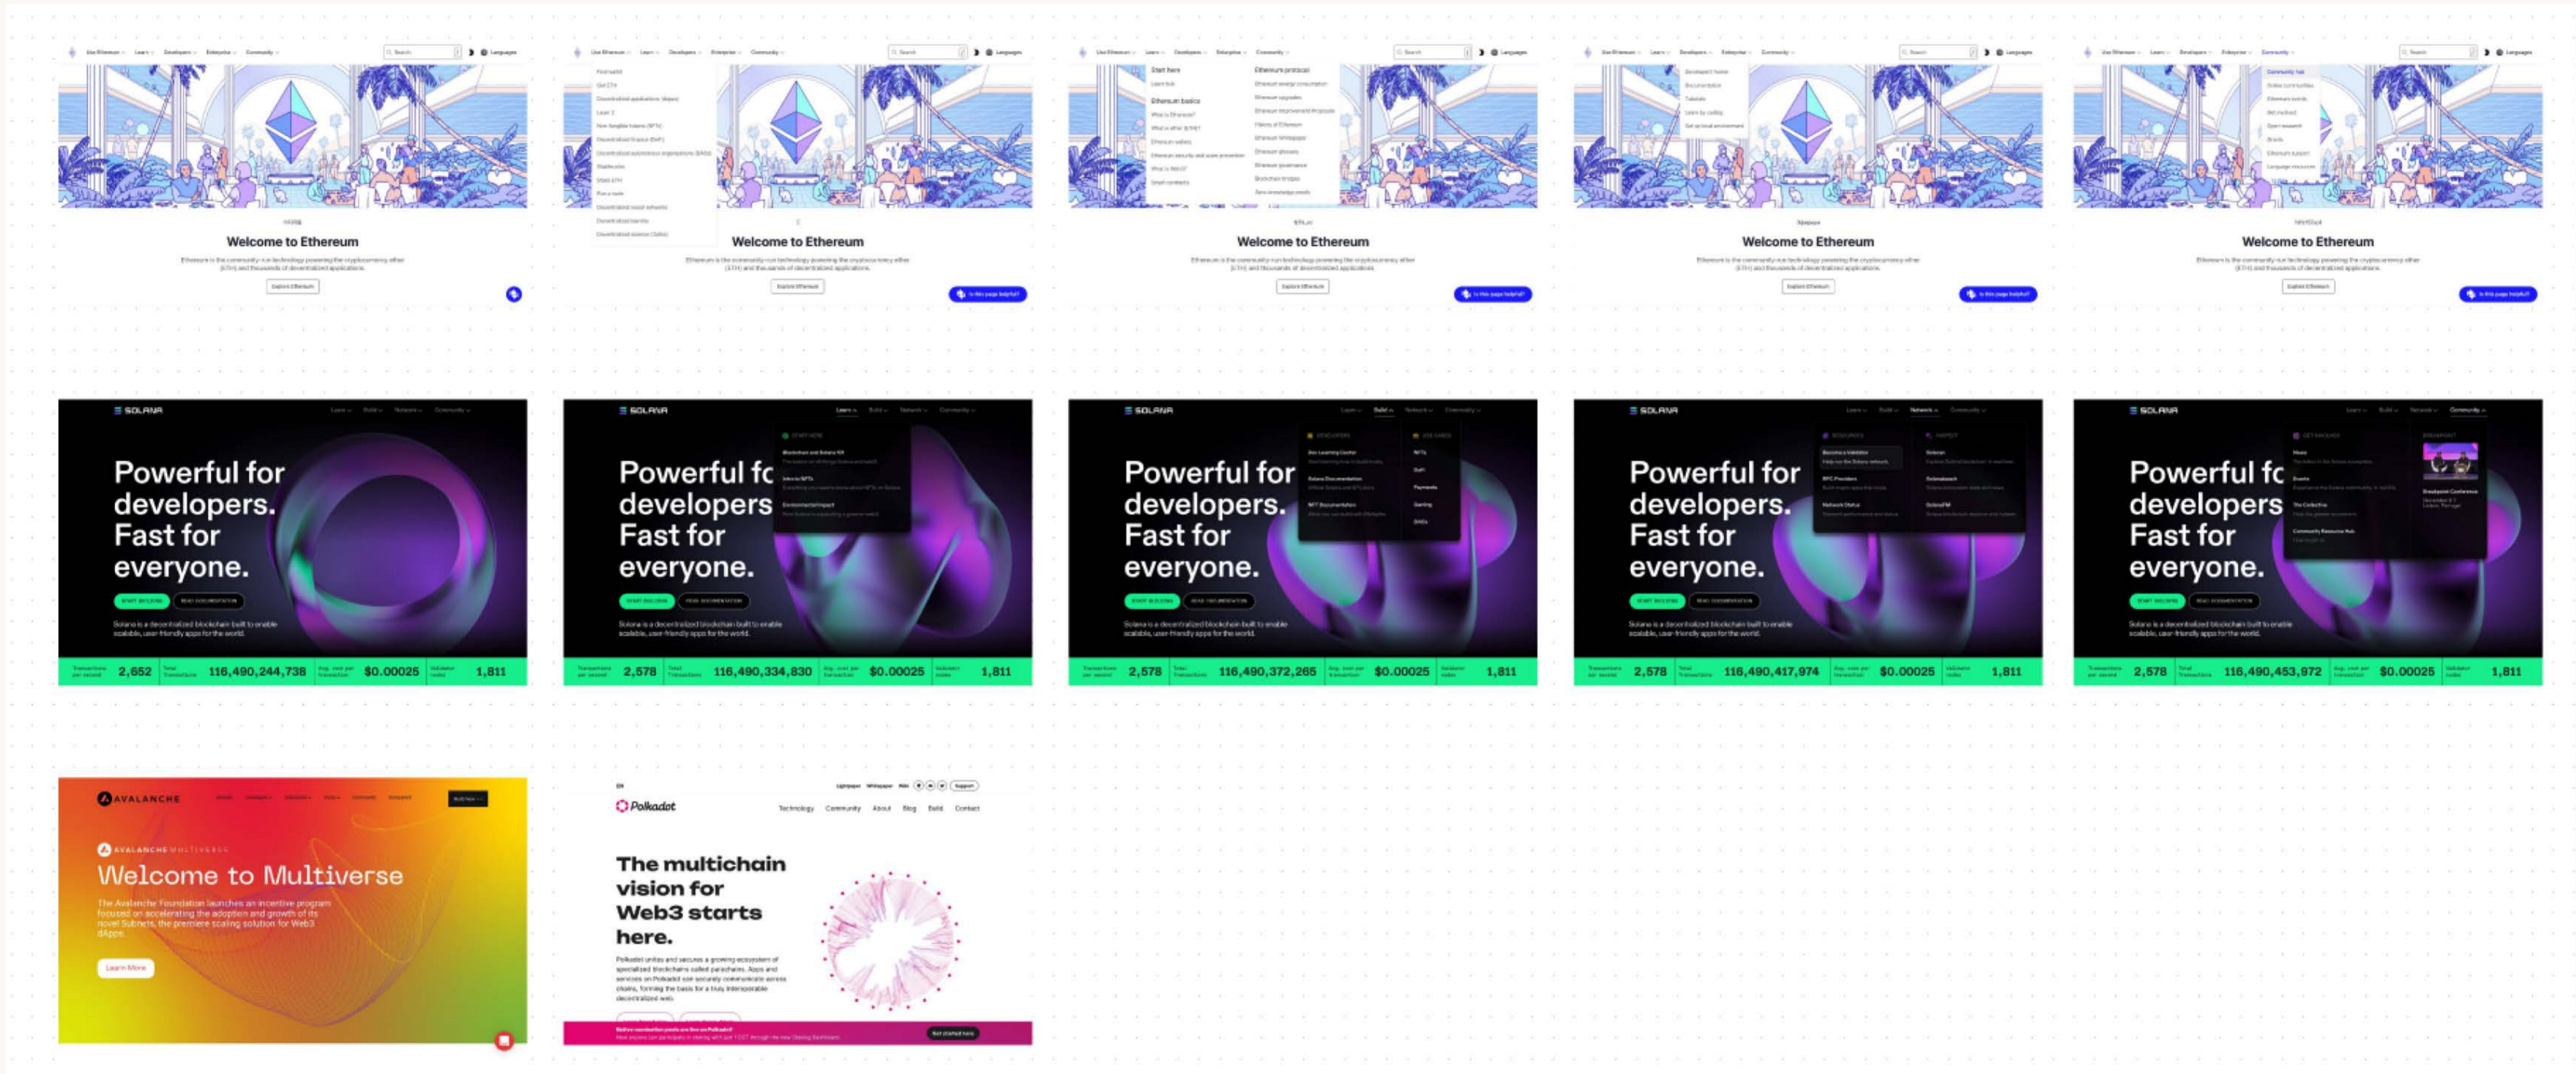

COMMON THEMES ↓

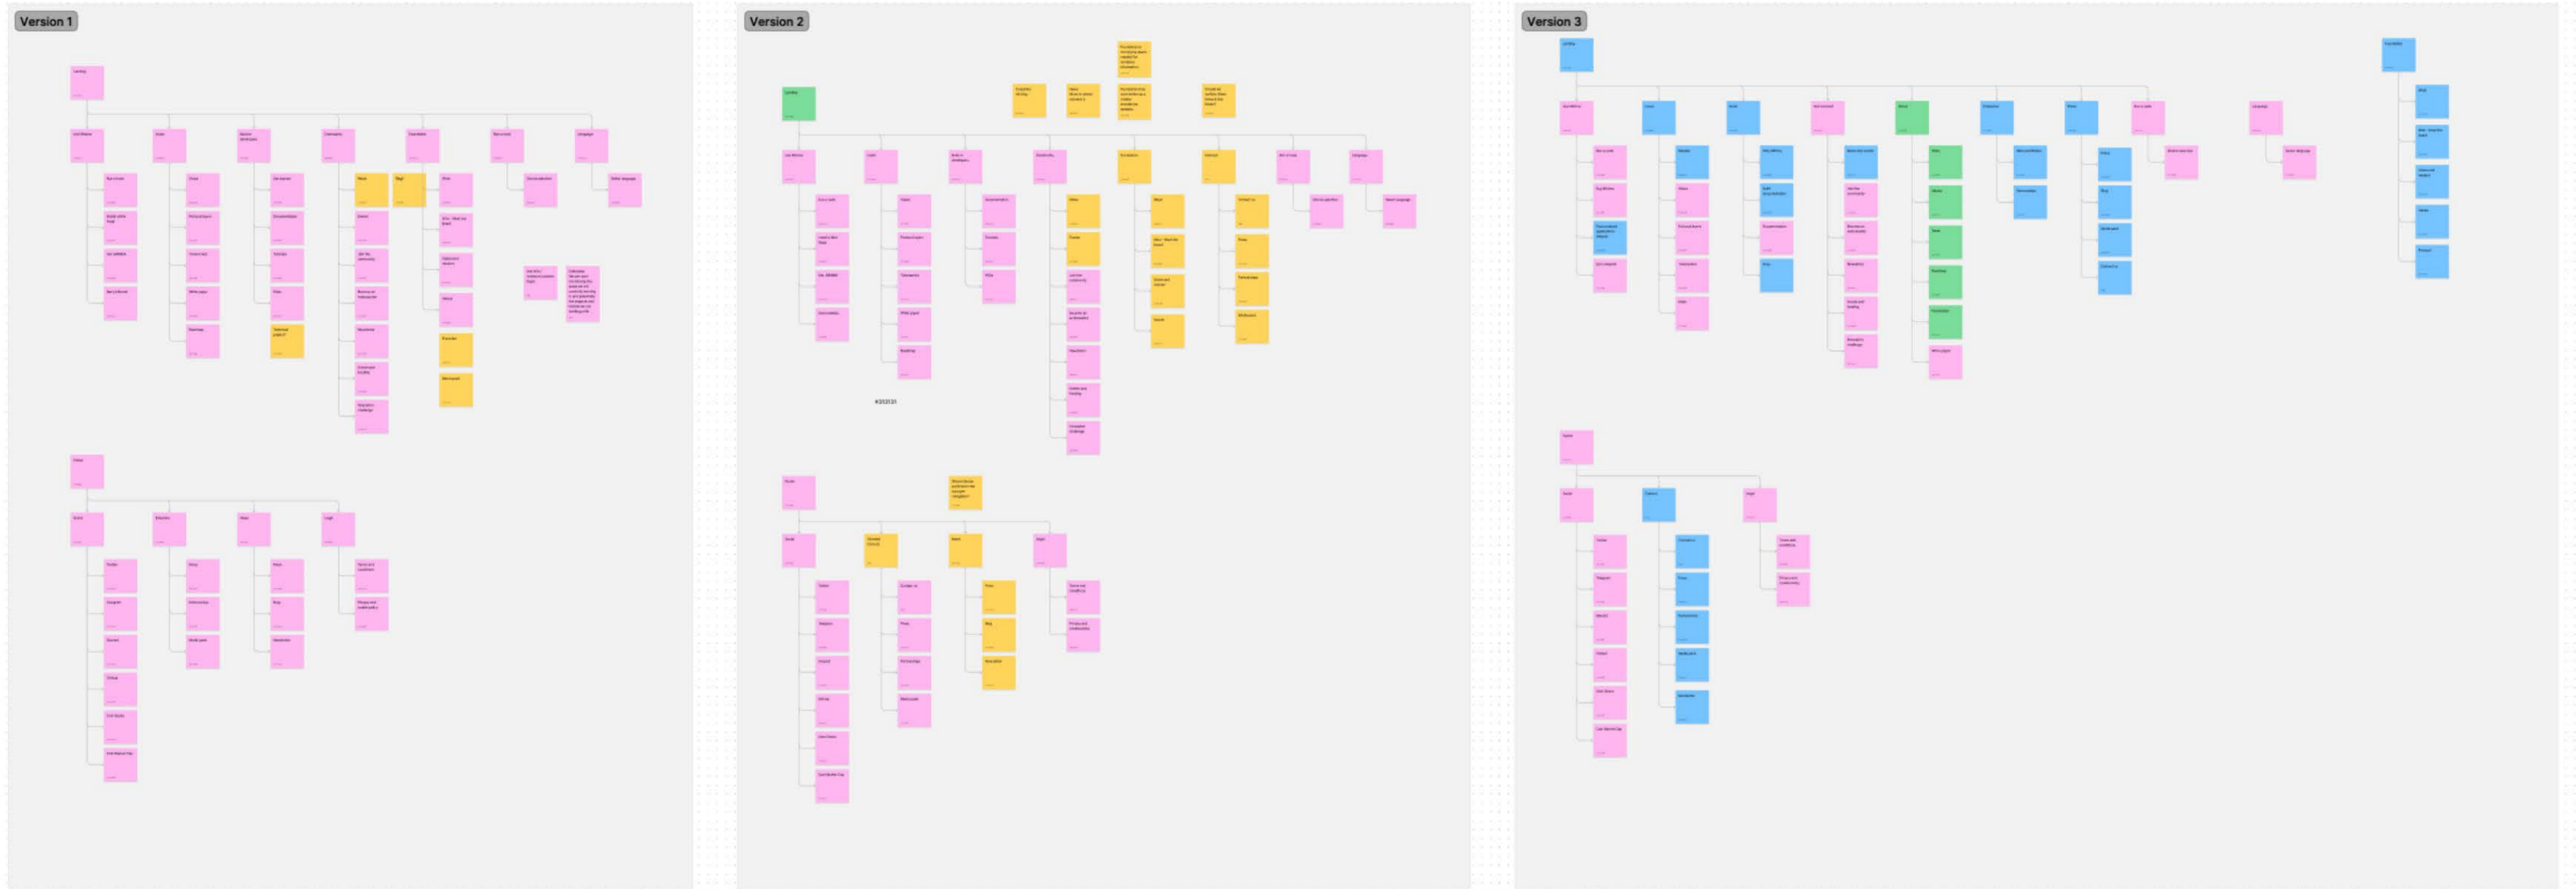

By categorising the topic of all comments from the focus group and recording the density of each topic, we can identify the importance of certain themes.

1 Billion tokens

The total supply of Minima tokens is pre-allocated and fixed at 1 billion tokens. There are no dedicated miners, there is no method for distributing coins after Mainnet launch.

Public	510,000,000 51% tokens	Private	490,000,000 49% tokens
--------	---------------------------	---------	---------------------------

Public sale	Node running incentives	Loyalty program & grants	Team & advisors	Private seed	Seed	Private rounds
16%	12%	23%	15.7%	7.49%	14.03%	11.78%
160,000,000 tokens	120,000,000 tokens	230,000,000 tokens	157,000,000 tokens	7,490,000 tokens	140,300,000 tokens	117,800,000 tokens

Learn to build a MiniDapp

The front-end for MiniDapps can be written using the widely known JavaScript, HTML and CSS. Minima's KISS scripting language is Turing-Complete, allowing for powerful smart contract driven applications.

Submit a project

The categories

Choose from six exciting categories with high growth and innovation potential.

01 Stablecoins Develop stable coin solutions that ensure stability, security, and accessibility for users, fostering trust in digital currencies. Submit Proposal	02 Automotive Construct novel applications that enhance the future of transportation, ranging from ride-sharing platforms to autonomous vehicle management systems. Submit Proposal	03 Defi Explore the possibilities of decentralized finance on the Minima Blockchain. Build innovative solutions that redefine the way we lend, borrow, and trade. Submit Proposal
04 Telecommunications Harness the power of the Minima Blockchain to innovate in the realm of telecommunications, enabling secure communication, data sharing, and decentralized networks. Submit Proposal	05 Gaming Merge the worlds of blockchain and gaming to create immersive experiences, in-game economies, and novel gameplay mechanics. Submit Proposal	06 Logistics Revolutionize supply chains and logistics management by leveraging the transparency, immutability, and efficiency of the Minima Blockchain. Submit Proposal
